Workspace Anywhere:

CAC Required: <https://www.safcn.af.mil/Mobile/>

Workspace Anywhere with  Hypori.

- Encrypted pixel transmission to/from the end-user device
- The virtual device is 100% separate prohibiting the DAF from accessing the users personal data on the physical device
- DAF data never leaves the IL5 GovCloud, therefore it is never stored on the end-user device
- No data on the device means NO NEED TO SEIZE THE USER'S DEVICE

FAQS

Does the DAF have access to my personal data, apps, and search history?

No. Unlike other apps, Hypori does not have access to your phone or anything on it – which means the DAF does not have access to your phone either. And the DAF data you access using Hypori is not saved or transmitted to your device. DAF business can't leak out of Hypori and the DAF stays out of your phone.

Will the DAF need to take my phone?

No. Since there's no data transmitted to your phone and no data stored on the device, it means there is no data to lose, no data to leak, no data to wipe – no need for the DAF to touch your phone.

What permissions will Hypori need on my smartphone?

You control if Hypori can access your microphone, camera, or location, just like managing access for any other app.

Hypori doesn't need administrator access to your phone. Any permissions granted within the Hypori app are limited to the app.

Hypori is the only solution with 100% user privacy and was approved by the Department of Air Force (DAF) CIO for the Enterprise.
